

# About TSC

Tuberous Sclerosis Complex [TSC] is a genetic disorder that affects people in many different ways and with differing degrees of severity.

TSC affects hundreds of individuals in New Zealand and thousands more carers, families and friends who live with the impact of the condition.

TSC tumours can grow in any organ of the body, commonly affecting the brain, skin, heart, lungs and kidneys. There is no cure for TSC, but with appropriate support people with TSC can live fulfilling lives.

## How does TSC affect lives?

Although TSC affects everyone living with the condition differently, common problems include:

**Difficult to control seizures**

**Developmental delay**

**Autism**

**Behavioural and learning difficulties**

**Sleep problems**

**Kidney problems**

# Tuberous Sclerosis Complex New Zealand [TSCNZ]

TSCNZ is a registered charity\* run largely by volunteers. We rely on donations to provide information and support to families affected by TSC.

Donate via our website:

Become a TSC Hero:

Donate or  
fundraise via  
Givealittle:

Every bit of assistance helps us to:

- ♥ Provide email & phone support for TSC families
- ♥ Maintain the TSCNZ website & Facebook page
- ♥ Produce & distribute TSC Resources
- ♥ Hold conferences & seminars
- ♥ Advocate to improve access to best practice care

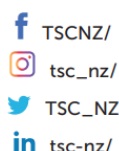

Donations of over \$5 are eligible for a New Zealand charitable giving tax credit.
